Collaborative violence prevention partnership:
- hospital
- law enforcement agency
- Centers for Disease Control and Prevention, Robert Wood Johnson Foundation, CDC Foundation

Hospital:
- violence prevention coordinator, information technology staff for programming and data extraction

Law enforcement:
- staff for police data extraction and programme

Public health agency:
- staff for data receipt and mapping

Hospital:
- access to electronic medical record system; law enforcement: access to crime incident record system

Activities
- Collaboration between partners (hospital, law enforcement, public health), local community partners
- Implement Cardiff Model data collection system and data sharing from hospital and law enforcement to public health agency
- Map Cardiff Model data and existing resources to determine gaps in law enforcement knowledge
- Plan (and implement) violence prevention activities

Participation
- Cardiff Model partnership members
- Core Cardiff Model partnership: hospital, law enforcement, public health agency
- LE agency, Cardiff Model partnership, local community partners

Short Term
- Established collaborative relationships and violence prevention partnership
- Improved data collection abilities by hospital resulting in usable data
- Accessibility and sharing of new hospital injury data sets and better identification of violence hot spots
- Improved mapping capabilities to better understand violent injury/crime in local county
- Proposals for changes in or creation of new violence prevention interventions

Intermediate Term
- Increased understanding of how to implement the Cardiff Model in the United States; possibly include other area hospitals and law enforcement agencies

Long Term
- Decrease in violence-related injuries treated in the ED
- Decrease in assaults recorded by LE
- Best practices for implementing the Cardiff Model in the USA
- Implementation of violence prevention interventions
