ENVIRONMENTAL FACTORS

There are multiple environmental factors associated with schizophrenia. Many of the known environmental risk impact on the developing brain and are shared with childhood neurodevelopmental disorders and other mental health conditions.

GENETIC FACTORS

Genetic studies have shown us the polygenic nature of schizophrenia, the impact on neuronal function, overlap with neurodevelopmental disorders and other mental health conditions.

SCHIZOPHRENIA

Disorder of neuronal function affecting multiple brain regions and behavioural domains

DELUSIONS
DEPRESSION
HALLUCINATIONS
NEGATIVE SYMPTOMS
MANIA
COGNITIVE DEFICITS
ABNORMAL PSYCHOMOTOR BEHAVIOR
DISORGANISED SYMPTOMS

PREGNANCY AND BIRTH COMPlications
MIGRATION
TRAUMA AND SOCIAL ADVERSITIES
SUBSTANCE ABUSE

CUMULATIVE EFFECTS OF COMMON RISK ALLELES
