

# Health–environment efficiency of diets shows nonlinear trends over 1990–2011

In the format provided by the  
authors and unedited

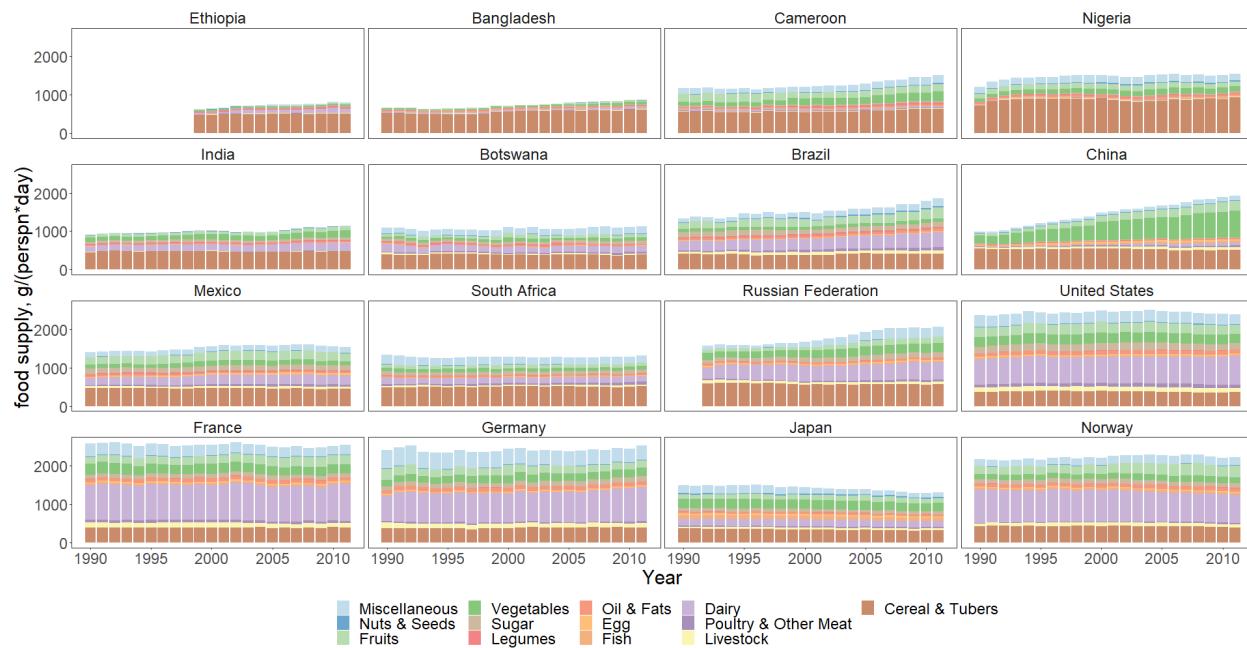

<b>Table of Supplementary Figures</b>	Figure S1 CV statistics of the ten-fold cross validation for the spline regression.....	2
Figure S2 The temporal change of per capita food supply in selected countries.....	2	

## **Table of Supplementary Tables**

Table S1 Regression results of the health-environment efficiency on SDI, GHG emissions .....	3
Table S2 Regression results of the health-environment efficiency on SDI, water withdrawal.....	3
Table S3 Regression results of the health-environment efficiency on SDI, acidifying emissions .....	4
Table S4 Regression results of the health-environment efficiency on SDI, eutrophying emissions .....	4
Table S5 Regression results of the health-environment efficiency on lagged SDI, GHG emissions .....	5
Table S6 Regression results of the health-environment efficiency on lagged SDI, water withdrawal.....	6
Table S7 Regression results of the health-environment efficiency on lagged SDI, acidifying emissions....	6
Table S8 Regression results of the health-environment efficiency on lagged SDI, eutrophying emissions.	7
Table S9 Results of spline regression with 2 splines .....	7

**Figure S1 Tufte's Box Plot for CV statistics of the ten-fold cross validation for the spline regression. a) GHG emissions, b) Water withdrawal, c) Acidifying emissions, d) Eutrophying emissions.** Linear splines are adopted without penalty. For each number of splines, 1000 trials are run for splitting the sample into ten folds. The central box denotes the interquartile range (IQR), the lower and upper edges representing the first (Q1) and third (Q3) quartiles, and the understated whiskers extend to the 10th and 90th percentiles, respectively.

**Figure S2 The temporal change of per capita food supply in selected countries.** Data are not available for all the countries during 1990-2011 (e.g. the statistics are lacking in 1990 for Russian Federation) and thus present absence in some cases.

Notes: Linear splines are adopted without penalty. Standard errors in parentheses are clustered to the country level. Two-sided t-tests are performed for hypothesis tests. \* p<0.1, \*\* p<0.05, \*\*\* p<0.01. The within R<sup>2</sup> and adjusted within R<sup>2</sup> are reported which captures the goodness of fit of the regressors excluding the country and year fixed effects.
